INSTALLATION:
Many people mount their Axworthy Ghost outside using trees in the yard. You may need to create a simple bracket to mount your wheels to: make sure you have enough clearance for the pulleys. Once your wheels are mounted you can loop your string around the pulleys and tie it off. It is best to tie the line off the wheels at a smaller size than the total length of the track and then stretch the line onto the wheels.

We provide fishing tackle with each kit that is designed to allow you to keep your line tight while attaching ghosts.

TIP:
If you want to keep your ghost (or other prop) from spinning, we recommend attaching two pieces of fishing line to the prop. This will keep your ghost facing the right direction and keep it from spinning aimlessly.
